

Tornado Awareness Week: Students at Bangor Elementary Learn How to be Prepared for Disasters and Emergencies

STEP Program Teaches Kids How to Assemble Emergency Kits and Develop an Emergency Plan with Their Families

BANGOR, Monday, April 11, 2016 – As Wisconsin marks Tornado and Severe Weather Awareness Week this week, 75 fourth and fifth graders at Bangor Elementary School learned today how to be prepared to respond in the event of a disaster or emergency.

The students are participating in the STEP, or Student Tools for Emergency Planning, program for the fourth year. The statewide program teaches 5th graders how to be prepared for various emergencies and disasters, including tornadoes, flooding and storms. The program also shows students how to put together an emergency kit and develop an emergency plan with their families.

“With little to no warning, emergencies and disasters can happen to anyone at any time,” said Principal Jac Lyga. “That’s why we feel it is so important to prepare our students. We’re excited to teach the STEP curriculum again this year and give our students the tools and confidence they need to respond in an emergency situation.”

At the event, the students received their own STEP emergency bags. They also heard from officials from Wisconsin Emergency Management, La Crosse County Emergency Management, and AT&T, as well as State Rep. Steve Doyle, about actions they can take to be prepared in an emergency situation.

“The STEP program is a great way to educate and empower our young people to be leaders in emergency preparedness,” said Rep. Doyle. “Not only does STEP teach students how to prepare for emergencies, but it also encourages them to take that information home and share it with their families and communities.”

The week of April 11-15 has been designated as Tornado & Severe Weather Awareness Week in Wisconsin, with two statewide Tornado Drills planned for April 14. Wisconsin averages 23 tornadoes annually, according to the National Weather Service.

The 2016 STEP program is supported by a \$15,000 AT&T Innovation & Investment Award. AT&T has a long-standing commitment to disaster preparedness and business continuity, and is the first company in the nation to earn U.S. Department of Homeland Security (DHS) certification for disaster preparedness. Since 2012, AT&T has provided \$58,000 total to support the STEP program in Wisconsin.

“We know how critical it is to be ready and prepared to respond in the event of a disaster or emergency,” said Scott T. VanderSanden, president of AT&T Wisconsin. “Not only are we proud that our network operations are

state-of-the-art when it comes to performing during and after a disaster, but we are also proud to help prepare Wisconsin families to respond to emergencies through our support of the STEP program.”

Teachers are provided with all STEP materials at no cost to the schools, including instructor guides, DVDs and copies of student handouts. All students participating in the program also receive an emergency kit to take home, which includes a flashlight. The basic lesson is only one hour of instruction, but teachers can expand the lessons to cover eight hours of materials.

This is the sixth year that STEP is being offered to schools in Wisconsin. Over 11,000 students from 200 schools across Wisconsin are participating in the STEP program this spring. Over 28,000 students have participated in the program over the past five years.
